Q7]

The list of activities in Software Project Management are:-

- 1.) Project planning & tracking
- 2.) Project resource Management
- 3.) Scope Management
- 4.) Estimation Management
- 5.) Project Risk Management
- 6.) Scheduling Management
- 7.) Project Communication Management
- 8.) Configuration Management

- ⇒ Project Planning is set of activities or task performed before construction of product starts.
- ⇒ Project resource Management takes into account the resources needed for project.
- ⇒ Scope management describes scope of the project. It clearly defines what project would do and what would not.
- ⇒ Estimation management includes cost estimation as well as line of code, effort & time.
- ⇒ Scheduling management in software refers to all activities to complete in specified order & within time allocated.

- ⇒ Projects risk management Consists of activities like identification, analyzing, preparing plan for predictable and unpredictable risk in projects.
- ⇒ Project Communication management is an essential factor for success of project.
- ⇒ Project Configuration management is about to control the change in software like requirements, design, and development of project.

Q8)

Contract Management is the art of achieving the mutual satisfaction of two or more parties whose objectives are dissimilar, although closely linked.

Where multiple business entities are involved, there are generally separate subcontracts. While all parties and participants will generally agree on general outcome for each part contract. Sound project management is a essential subset of Contract management.

Technical Project Management is a process of managing IT or IT related projects. Technical project managers are critical Conception, development and execution of project. In addition to Technical Content is trust building.

- a) Planning
- b) Scheduling & timeline maintenance
- c) Execution
- d) Managing the project
- e) Communication with stakeholders
- f) Ongoing maintenance

Q9)

Method:- A method is a procedure for attaining an object such as a systematic procedure, technique or mode of enquiry employed by or proper to a particular discipline or a systematic plan followed in presenting material for instruction.

In other words, a method refers to a single ~~action~~ action tool, technique, process or way of doing something.

Methodology:- A methodology is a body of methods, rules and ~~procedures~~ employed by a discipline, a particular procedure or set of procedures.

Essentially a methodology is a collection of methods, practice, process, technique. In SPH, methodologies are specific, strict and contain a series of steps and activities for each phase in project life cycle.

Plan :- A project plan helps a project manager to understand, monitor and control the development of software project. It ensures that software is developed according to user requirements, objective and scope of projects. It identifies the role of each project manager and team members involved in projects.
